Software Engineer | Full-Stack & Machine Learning

Stanford Computer Science graduate with experience building mobile applications, scalable workflow automations, and machine learning systems.

EDUCATION

Stanford University

B.S. in Computer Science, June 2026

TECHNICAL SKILLS

Languages: Python | C/C++ | JavaScript | TypeScript

Frameworks & Technologies: React Native | Expo | Pytorch | OpenCV | Medplum | Supabase | FHIR R4

Tools: Git | GitHub | Airtable | Figma

WORK EXPERIENCE

Stanford Office of Technology Licensing

August 2025 – December 2025

Computer Science Intern

- Built and deployed eight contract workflow automations, reducing manual routing and follow-up across agreement generation, approval, and signature processes.
- Engineered the underlying workflow architecture using conditional logic, structured data models, dynamic forms, role-based routing, and archival transitions; resolved data-propagation and redlining failures.

Stanford Haas Center for Public Service

April 2025 – August 2025

Executive Office Assistant, Technology Assistant in Communications

- Built a JavaScript-based reservation system in Airtable and integrated it with the Center's Drupal website to support organization-wide scheduling and resource coordination.
- Refactored and automated calendar workflows and scripts, improving reliability and reducing manual scheduling coordination across teams.

The Marriage Pact

Sales/Expansion

June 2024 – March 2025

Product Manager

January 2024 – June 2024

- Analyzed prior launch performance and evaluated 3,000+ university applications to identify high-potential partners based on institutional fit and student demographics.
- Recruited and led school-specific teams, preparing partners on branding, growth strategy, and launch operations for handoff to product managers.
- Led cross-functional teams across 16–20 university launch cycles and developed audience-specific marketing strategies that generated 10,000+ conversions.

PROJECTS

TCMNet: Learning Diagnosis & Prescriptions in Traditional Chinese Medicine | [GitHub](#) | [Website](#) | Python, PyTorch

- Built TCMNet, a concept-guided PyTorch model for TCM diagnosis and herbal recommendation, jointly predicting 228 syndromes, auxiliary medical concepts, and 596 herb rankings from 1,869 symptom features.
- Added symptom-suggestion and neural herb-ranking pipelines, achieving 86.93% accuracy / 85.44% macro-F1 for syndrome prediction and 97.33% top-5 herb recall.

Contact AllerKey: Digital Health Allergy Care Platform | React Native, Medplum, FHIR R4

- Owned development of practitioner dashboard for retrieving patient records and images, persisting patient-specific allergen grades, updating workflow statuses, and generating assessment reports.
- Contributed to patient intake and clinical photo-submission workflows by implementing intake-form functionality, photo capture/upload, practitioner email validation, and UI improvements.

CityFix: Civic Infrastructure Reporting Platform | [GitHub](#) | React Native, Expo, TypeScript, Supabase

- Built mobile reporting workflows for capturing or uploading issue photos, attaching location data, reviewing report details, submitting reports, and tracking issue status.
- Implemented editable report histories, persistent issue following, guest and authenticated user flows, onboarding, and dashboard-to-issue navigation using Supabase and AsyncStorage.
